Introduction

Amazon Web Services (AWS) Cloud is a secure and flexible cloud platform that provides on-demand computing, storage, and networking services over the internet. You can build, run, and manage applications on AWS Cloud without maintaining physical infrastructure.

This document is for beginners who are new to Amazon Web Services (AWS) and want to set up an AWS account with basic administrative access. It covers AWS account creation, root account security, IAM Identity Center user setup, and administrative access assignment. to set up an AWS development environment.

Prerequisites

- A stable internet connection
- A valid email address
- A valid credit/debit card
- A valid phone number
- An internet browser
- A valid UPI ID
- An authenticator app on mobile/desktop

Getting Started

In this section, you learn the basic setup required to use the AWS Cloud. It includes:

- Create an AWS account
- Secure AWS account
- Set Up a User in IAM Identity Center
- Assign Administrative Access

1. Create an AWS Account

An AWS account provides access to create and manage cloud resources. The following section explains how to create an AWS account.

Prerequisites

- An internet browser
- A valid phone no.
- A valid email address
- A valid credit/debit card

To create,

1. On a web browser, go to aws.amazon.com.

2. On the right pane of home page, choose **Create Account**.
3. On the sign-up page, perform the following:

- a. In the email address field, enter desired email address.
- b. In the account name field, enter desired account name.
- c. Select **Verify email address**.

You receive a verification code in your email inbox.

- d. In the **Verification code** field, enter Verification code.
- e. Click **Verify**.

You are redirected to a new page you create your password.

- f. In the **Root user password** field, enter a password.
- g. In the **Confirm root user password** field, re-enter password.
- h. Click **Continue**.

You are redirected to a new page to select account plan for your AWS account.

Choose your account plan

Free (6 months)
Learn, experiment, and build prototypes

- ✓ Receive up to \$200 in credits
- ✓ Includes free usage of select services
- ✗ Workloads scale beyond credit thresholds
- ✗ Access to all AWS services and features

ⓘ After the 6 month free period or when all credits are used, you can choose to upgrade to a paid plan. Otherwise, your account closes automatically.

Choose free plan

Paid
Develop production-ready workloads

- ✓ Receive up to \$200 in credits
- ✓ Includes free usage of select services
- ✓ Workloads scale beyond credit thresholds
- ✓ Access to all AWS services and features

ⓘ After all of your credits are used, you are charged using *pay-as-you-go* pricing.

Choose paid plan

4. On the account plan page, select one of the following options:

- **Free plan:** Select the option to learn and build prototypes.
- **Paid plan:** Select the option to develop production-ready workflows.

The Contact Information page opens.

5. On the **Contact Information** page, perform the following:

Free Tier offers

All AWS accounts can explore 3 different types of free offers, depending on the product used.

Always free
Never expires

12 months free
Start from initial sign-up date

Trials
Start from service activation date

Sign up for AWS

Contact Information

How do you plan to use AWS?

☐ Business - for your work, school, or organization
☐ Personal - for your own projects

Who should we contact about this account?

Full Name

Country Code Phone Number

Country or Region

Address line 1

Address line 2

City

State, Province, or Region

Postal Code

☐ I have read and agree to the terms of the [AWS Customer Agreement](#)

Agree and Continue (step 2 of 5)

- a. From the AWS plan options, select one of the options:
 - **Business:** For your work, school or organization.
 - **Personal:** For individual or personal projects.
- b. In the respective fields, add your contact information.
- c. In the checkbox field, accept **AWS Customer Agreement**.
- d. Choose **Agree and Continue**.

The **Billing Information** page opens.

6. On the **Billing Information** page, perform the following:

Why is this required?
Our verification process holds USD \$1 (or equivalent) for 3-5 days to verify your account and prevent fraud.
For the free plan, no charges occur until upgrade to a paid plan. Providing your billing information now enables a seamless upgrade to a paid plan.

Billing Information
Your billing country determines the payment methods available to you to pay for AWS services.

Billing country
India

Payment method type

- ☒ **UPI AutoPay**
Set up automatic payments using Unified Payments Interface (UPI).
- ☐ **Credit or debit card**
AWS accepts all major credit and debit cards.

UPI AutoPay information
Use your preferred UPI app to setup automatic payments. You can cancel AutoPay at any time. [Learn more](#)

Automatic payment limit
₹15,000

UPI ID
Enter your UPI ID

Billing address

- ☒ **Use contact address**
- ☐ **Use a new address**

Verify and continue (step 3 of 5)

- a. From the **Billing country** drop-down list, select your billing country.
- b. Under **Payment method type**, perform one of the following:
 - Set Up UPI Autopay
 - a. Select **UPI Autopay**.
Note: UPI Autopay is available only for AWS accounts register in India.
 - b. In the **UPI ID** field, enter your UPI ID.
 - c. In the **Billing address** field, select one of the following:
 - Use Contact address

- Use a new address
- d. Click **Verify and continue** to proceed.

Note: A ₹2 refundable transaction is required to verify your payment method.

- Use a credit/debit card
 - a. Select **Credit or debit card**.
 - b. Enter card details.
 - c. In the Billing Address field, select one of the following:
 - Use Contact address
 - Use a new address
 - d. Click **Verify and continue** to proceed.

The **Confirm your identity** page opens.

7. On the **Confirm your identity** page, perform the following:

- a. Under verification code options, perform one of the following:
 - Select Text message to receive the verification code.
 - Select Voice call to receive the verification code.
 - b. From the Country or region code drop-down list, select your country code.
 - c. In the **Mobile phone number** field, enter your phone number.
 - d. In the characters field, enter the text displayed in security check field.
 - e. Select **Send SMS** to receive the verification code.
8. In the **Verify code** field, enter the code.

9. Choose **Continue**.

The support plan page opens.

10. On the support plan screen, choose desired plan type.

Note: You can see the full list of differences between the tiers, see [Compare AWS Support Plans](#).

11. Select **Complete Sign Up**.

Your account is set up and activated. You receive an email from AWS after activation completes. You can use the credentials to sign in to your root account.

2. Secure AWS Account

An AWS account includes a root user that has full access to all AWS services and account settings. This section explains the root user role and the importance of securing it with multi-factor authentication.

Prerequisites

- A supported web browser
- An authenticator app on mobile/desktop
- An AWS account

To secure your AWS account,

1. On a web browser, go to aws.amazon.com.

2. On the right pane of the home page, choose **Sign in to console**.
3. On the **Sign in** page, select **Root User**.

4. In the **Root user email address** field, enter the email address.

Note: Enter the email address you use during AWS account creation.

5. Choose **Next**.

6. In the **Password** field, enter password.

7. Select **Sign in**.

The **AWS Management Console** Home screen appears.

8. On the console home page, in the right pane, select your account name.

9. From the account menu, choose **Security Credentials**.

10. In the **Multi-factor authentication** section, choose **Assign MFA device**.

11. On the **Select MFA device** page, select **Authenticator app**.

Note: You can also choose other multi-factor authentication options. For more information, see [Multifactor Authentication Options in AWS](#).

Select MFA device [Info](#)

MFA device name

Device name
This name will be used within the identifying ARN for this device.

Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . _ - (hyphen)

MFA device

Device options
In addition to username and password, you will use this device to authenticate into your account.

☐

Passkey or security key
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.

☒

Authenticator app
Authenticate using a code generated by an app installed on your mobile device or computer.

☐

Hardware TOTP token
Authenticate using a code generated by Hardware TOTP token or other hardware devices.

[Cancel](#) [Next](#)

12. In the **Device name** field, enter desired device name.

13. Select **Next**.

Set up device [Info](#)

Authenticator app
A virtual MFA device is an application running on your device that you can configure by scanning a QR code.

1. Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
[See a list of compatible applications](#)
2.  [Show QR code](#)
Open your authenticator app, choose **Show QR code** on this page, then use the app to scan the code. Alternatively, you can type a secret key. [Show secret key](#)
3. Type two consecutive MFA codes below

Enter a code from your virtual app below

MFA Code 1

Wait 30 seconds, and enter a second code entry.

MFA Code 2

[Cancel](#) [Previous](#) [Add MFA](#)

14. On the **Set up device** page, select **Show QR code**.

A QR code appears on the page.

15. On your mobile, open authenticator app.

16. In the authenticator app, scan the QR code.

A verification code appears in the authenticator app.

17. In the **MFA code 1** field, enter the code.

A new verification code generates on authenticator app.

18. In the **MFA code 2** field, enter the verification code.

19. Select **Add MFA**.

MFA device assigned

You now must authenticate with this MFA device when you sign in to the AWS console.

Console sign-in [Enable console access](#)

Console sign-in link [https://\[redacted\]signin.aws.amazon.com/console](#) Console password Not enabled

Multi-factor authentication (MFA) (1) [Remove](#) [Resync](#)

Use MFA to increase the security of your AWS environment. Signing in with MFA requires an authentication code from an MFA device. Each user can have a maximum of 1 MFA device assigned. [Learn more](#)

Device type	Identifier	Certifications	Created on
☒ Virtual	arn:aws:iam::[redacted]:mfa/[redacted]	Not Applicable	Now

The **Security credentials** page appears. A notification message at the top states that the MFA device assigned.

3. Set up a User in IAM Identity Center

You can create an administrative user in IAM Identity Center. IAM Identity Center provides temporary credentials for each sign-in that improves the security of your AWS account. This section explains how to add a user to group in IAM Identity Center.

Prerequisites

- An AWS account
- A supported web browser
- A valid email address

To set up,

1. On the AWS Console home page, in the search bar, type **IAM Identity Center**.

The **IAM Identity Center** service overview page opens.

2. On the **Enable IAM Identity Center** tab, select **Enable**.

The **Enable IAM Identity Center with AWS Organizations** overview page opens.

3. On the **Enable IAM Identity Center with AWS Organizations** page, select **Enable**.

The **IAM Identity Center** Console appears.

4. On the **IAM Identity Center** console, choose **Users**.

5. Click **Add user**.

6. On the **Specify user details** screen, complete the following information:

The screenshot shows the 'Specify user details' form. On the left is a progress indicator with four steps: 'Specify user details' (selected), 'Add user to groups', 'Review and add user', and 'Add user to groups'. The form has several sections: 'Primary information' (highlighted with a red box) containing fields for Username, Password (with options to send email or generate a one-time password), Email address, Confirm email address, First name, Last name, and Display name; 'Contact methods - optional'; 'Job-related information - optional'; 'Address - optional'; 'Preferences - optional'; and 'Additional attributes - optional'. At the bottom right are 'Cancel' and 'Next' buttons.

a. In the **Username** field, enter a user name.

b. Under **Password**, select **Send an email to this user with password setup instructions (Recommended)**.

c. In the **Email address** field, enter a valid email address.

d. In the **First name** field, enter the user's first name.

e. In the **Last name** field, enter the user's last name.

f. In the **Display name** field, review the name

Note: You can fill the optional information if desired.

g. Select **Next**.

The **Add users to groups-optional** page opens.

7. On the **Add user to groups- optional** page, select **Create group**.

Step 1
Specify user details

Step 2 - optional
Add user to groups

Step 3
Review and add user

Add user to groups - optional
You can assign this user to one or more groups.

Groups (0)

Find groups by group name

Group name | Description

No groups found

8. On the **Create Group** Page, perform the following:

Create group

Group details

Group name

Admins

Maximum of 128 characters

Description - optional

Group description detailing the permissions assigned to this group.

Enter description

Maximum of 256 characters

Add users to group - optional (0)
Select workforce users to add to this group.

Find users

Username | Display name | Status | MFA devices | Created by

No users found

Add user

Cancel Create group

a. In the **Group Name** field, enter group name.

b. (Optional) In the description field, add group description.

c. Click **Create group**.

The **Groups** page displays on your screen. You can see the new **Admins** group under group name.

9. On the **Add users to groups- optional** page, select the **Refresh** button.

The new **Admins** group appears in the list.

10. Next to the **Admins** group, select checkbox and choose **Next**.

11. On the **Review and add user** page, review the information and choose **Add user**.

The **IAM Identity Center > Users** page appears. A notification message confirms that the user is added.

Note: AWS recommends using the root user only for account-level tasks and not for daily operations.

4. Assign Administrative Access

The user exists but does not have access to AWS resources. In this section you learn to grant account access and permissions to the user group.

Prerequisites

- A supported web browser
- An AWS account

To assign,

1. Open the **IAM Identity Center** console.
2. In the left navigation pane, choose **AWS accounts**.
3. On the **AWS accounts** page, select the checkbox next to the management account name.
4. On the page, choose **Assign users or groups**.
5. On the **Select users and groups** page, choose the **Users** tab,
6. On the page, select the checkbox for the user, and choose **Next**.
7. On the **Select permission sets** page, select the checkbox for **AdministratorAccess**.

Note: Administrator Access is an AWS-managed policy that provides full access to AWS services and resources.

8. Choose **Next**.
9. On the **Review and submit** page, review the details, and choose **Submit**.

A notification appears on your page. It confirms that your AWS account is reprovisioned and the permission set update is complete.
