

Get to Understand WhatsApp Status

WhatsApp Status is a temporary 24-hour sharing feature that allows you to share text, photos, videos, GIFs, and voice notes. It offers a quick and easy way to share daily moments or updates with selected contacts.

WhatsApp Status is for both personal and business users. It enables individuals to connect with their family and friends, and allows business users to share promotions, product launches, and announcements. WhatsApp Status updates are end-to-end encrypted, ensuring privacy and security.

Technical Specification

Feature Type	Specification
Video	The maximum duration is up to 90 seconds.It supports 3GP and MPEG4 (MP4) formats.
Photo	The recommended resolution is 1920 × 1080 pixels (16:9 aspect ratio) for optimal full-screen view.
Voice Note	The maximum duration is 30 seconds per clip.
Text	The character limit is up to 139 characters. It supports emojis, background colours, and font customization.

Access Options

Platform	Accessibility	Features Available
Mobile (Android/iOS)	Full	Create, edit, view and reply to status updates.
Web/Desktop	Partial	View and reply to status updates, but do not allow status creation
Business App	Full	Create promotional updates, track views, and engage with customers

WhatsApp Status Overview

WhatsApp operates through a process of creation, encryption, delivery, and expiry. It functions consistently across Android, iOS, and WhatsApp Web, ensuring secure and seamless performance for all users.

Feature Area	Description
Status Interface	The Status experience begins in the Updates tab, which serves as the central interface for viewing, creating, and managing Status updates. It displays the user's current updates, recent updates from contacts, and available privacy options
Status Update Creation	User creates a new update using the My Status option or the Camera icon within the Updates tab. They can choose content that includes text, photo, voice, or video from the Camera Icon.
Content Customization	After selecting the content type, the user can customize it with editing tools to add captions, emojis, background colour, music, and stickers. These tools are available on top of the Status update screen.
Privacy Preferences Setting	User can configure permissions from the Privacy settings within the status screen. They can choose which contacts are allowed to see the status update.
Viewer Display Behaviour	The update appears in the Updates tab on viewers' devices under the creator's name or business title. Authorized contacts can open, view, and interact with the update directly within the app interface.
Automatic Expiry	After 24 hours, WhatsApp automatically deletes the Status update from the creator's profile, the viewers' feeds, and its servers. This ensures all shared content remains temporary, private, and secure.

Who can use the WhatsApp Status Feature?

- Individual and Business User
Both individual and business users represent the primary audience for WhatsApp Status. They can create, view, and delete Status updates within the Updates tab on WhatsApp.

WhatsApp allows both users to view or react to their updates through the viewers list feature.

- **Community or Informal Group User**
This group includes individuals managing clubs, classrooms, interest groups, or community networks. WhatsApp allows them to create and view Status. They use privacy settings to share updates with specific group members only.

Note:

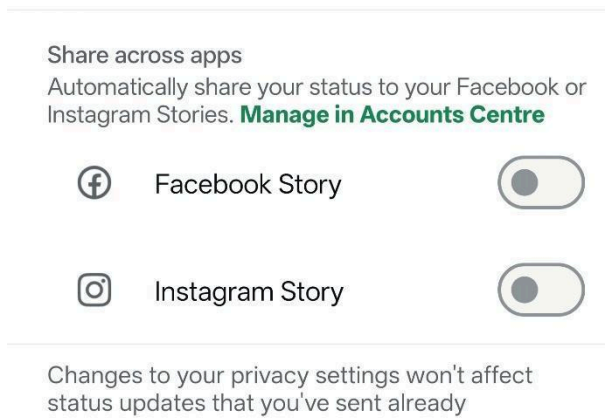

- You can not turn off or disable WhatsApp Status.
- It's not possible to revert to a previous version of WhatsApp Status.

Key Benefits

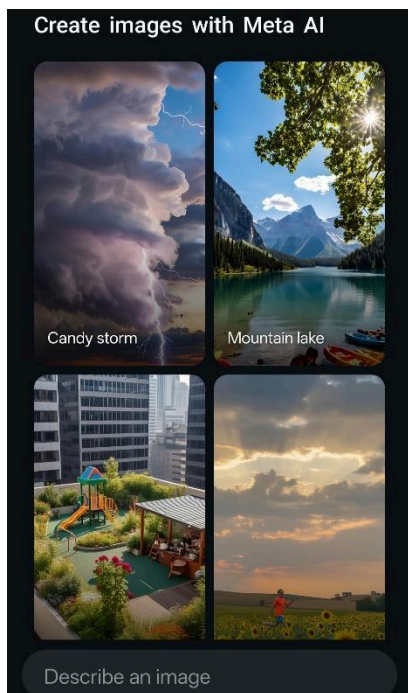

- **Quick sharing:** Allows you to share daily moments instantly with selected contacts.
- **Temporary updates:** Deletes all posts automatically after 24 hours.
- **Rich media support:** Allows you to share text, photos, videos, GIFs, and voice notes.
- **User privacy:** Offers privacy settings that allow you to control who can view their updates.
- **End-to-end encryption:** Protects all shared content to ensure privacy and data security.
- **Creative expression:** Offers tools to add emojis, stickers, text, and background colours.
- **Engagement tracking:** Shows who views or likes each status update.
- **Business communication:** Helps businesses share promotions, product launches, and announcements.

Other Key Functions

- **Cross-Platform Sharing:** WhatsApp Status enables easy cross-platform sharing through its Status Privacy feature. Users can directly share their Status updates to other apps such as Instagram and Facebook.

- **AI Images:** The feature enables users to create AI-generated images on the Add status screen by entering a prompt (Example- “sunset over mountain lake”). Then, the user uploads these AI-generated images for status updates.

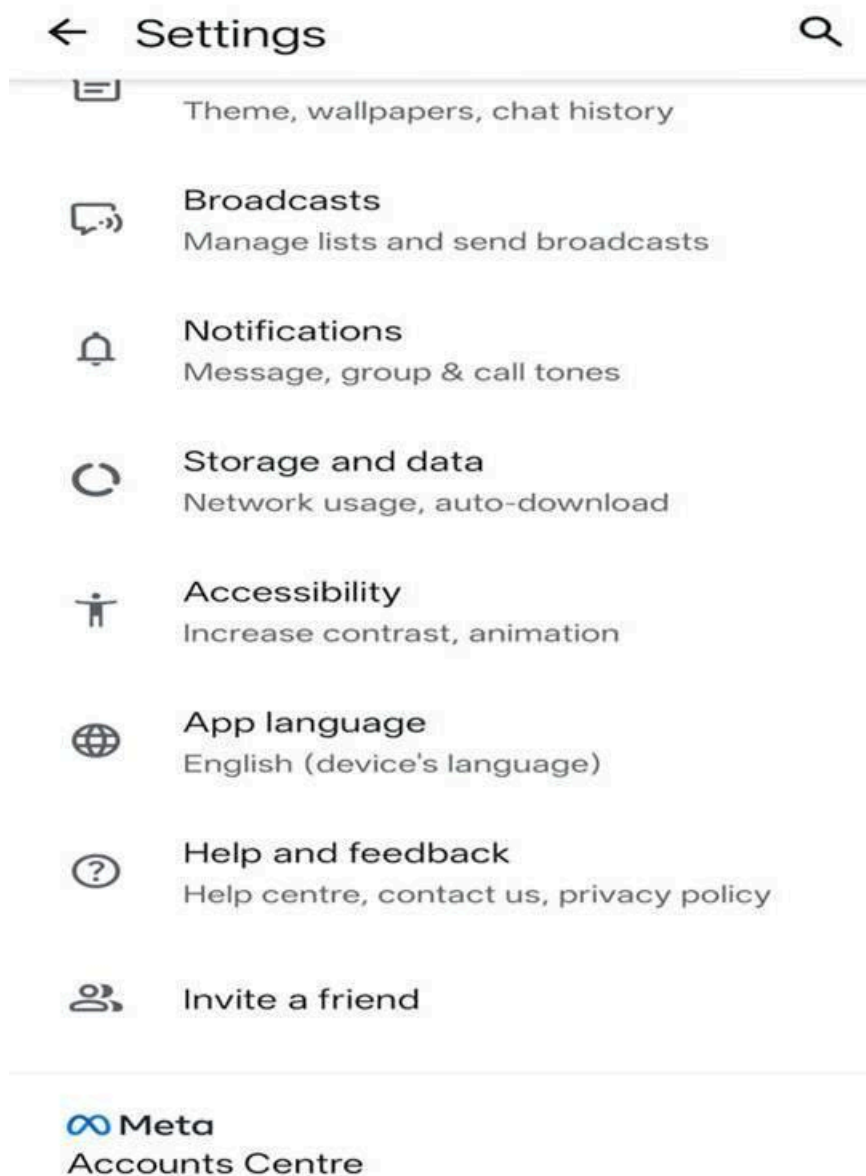

Reference

Notification Options in WhatsApp

WhatsApp allows you to customise notification preferences for individual chats, group calls and in-app alerts. This allows you to control visibility, privacy, and alert behaviour across Android, iOS, and desktop platforms.

Where to Access the Option?

Notifications appear in the Settings menu of WhatsApp on both mobile/desktop devices.
